WORK

LifeBonder

Full Stack Web Developer Intern

Denmark (Remote)

2024 - Present

WEEE Open

Software Developer

Turin, Italy

2024 - Present

EDUCATION

Politecnico di Torino

Bachelor's of Science, Computer Engineering

Turin, Italy

2023 - Present

42 Istanbul

Student, Computer Science

Istanbul, Turkey

2021 - 2023

PROJECTS

Camagru

A full-stack web application for posting images with stickers.

Used Technologies: Javascript, HTML, CSS, PHP, MySQL, NGINX, Docker

- Implemented a router from scratch in order to understand more about how single page applications work.
- Learned about transpilers like Babel in order to make the website work in very old browsers like Firefox v41 and Chrome v46.
- Managed the database without using any ORM. This made me understand more about SQL in general.
- Used an external API to forward email verification code in PHP using cURL.

[Live Site](#) | [GitHub](#)

ft_transcendence

A full-stack web application for playing Pong against other people online.

Used Technologies: NestJS, Typescript, PostgreSQL, Prisma, React, HTML, CSS, Docker

- Used WebSockets in chat rooms, game rooms and homepage (for displaying the status of users) to establish the connection between server and clients.
- Implemented the OAuth system of my school in the login page to automatically fill the user's profile.
- Used Canvas API in Javascript to render the Pong game in browsers.
- Implemented a session system using "express-session" to handle the authentication.

[GitHub](#)

ft_irc

A minimal IRC server project using C++.

Used Technologies: C++, Makefile

- Created my own IRC server, fully compatible with an official client.
- Learned about socket programming in C++ to communicate between two sockets on the network.
- Learned about RFC 1459 Internet Relay Chat Protocol.
